DORA REGISTER OF INFORMATION · LUXEMBOURG

Will your register pass the 2027 checks?

10 checks to run before December, while there's still time to chase your providers.

WHY NOW

Accepted in 2025 doesn't mean accepted next time.

- The CSSF warned that its 2026 checks cover more data fields.
- Next filing: reference date 31 December 2026, due end of March 2027.
- Much of the data comes from your providers, and getting it takes weeks.

01

The reporting entity is identified

LEI, name, country, entity type, competent authority and reference date.

02

Every ICT provider is identified

Identification code and its type, legal name, person type, headquarters country.

03

The ultimate parent is known

For every provider, or "not applicable" declared. And the parent is registered as a provider too.

04

The data location is known

Countries of provision, storage and processing, recorded and confirmed for every service line.

05

Arrangement dates are recorded

A start date and an end date for every service line.

06

Signatories are recorded

For every contractual arrangement.

07

Supply chains are recorded

Who subcontracts what behind each service, with rank and recipient.

08

Every function has a criticality assessment

With its date, RTO, RPO and the impact of discontinuation.

None of these fields come from a contract. They need a decision from someone who knows how the service runs.

09

Substitutability is assessed

For every assessed service: substitutability, last audit date, whether it can be brought back in-house, alternatives identified.

10

An exit plan exists

For every assessed ICT service.

ONE PRINCIPLE

Not assessed

Missing data is never a pass.

A 100% score on half the data says nothing about what the CSSF will see. Always show the score **and** the coverage.

THE LIMIT

What a register can't prove.

Your incident procedures and recovery tests. The register says who you depend on; it doesn't say whether you can cope.

A good check flags it as "cannot be assessed from register data" instead of skipping it.

REGISTER HEALTH CHECK

Find out what will fail before the regulator does.

- Send the register you filed in 2026.
- We run it through these checks, and the rest.
- Report within 48 hours: every finding, where it sits, how to fix it.
