AI ACT · BANKS AND INSURERS

The 4 questions an auditor will ask about your GenAI assistant.

And why the answer must come from the system, not from a questionnaire.

THE CONTEXT

Logs, kept for at least six months.

- Credit scoring and life and health insurance pricing are high-risk uses.
- In my reading of Article 26, their deployers keep the automatically generated logs for at least six months.
- Current timeline: compliance expected by 2 December 2027. The date has moved before; the need for evidence hasn't.

Question 1

Which model answered?

For every request, the log records the model, its provider and the region it ran in.

Bonus: it's also what your DORA register of ICT providers needs.

Question 2

Under which jurisdiction?

A sovereignty level set for each AI system, and checked on every request:

- **Level 1**: European operator and European hosting.
- **Level 2**: hosted in the EU by a non-European company.
- **Level 3**: outside the EU, on an explicit, logged exception.

Question 3

Under which rule?

Every entry keeps the exact version of the rule applied and the decision: allowed, refused or rerouted, with the reason.

A refusal is logged like everything else. **The refusal is itself evidence.**

Question 4

Has the log been changed?

- Each entry holds the fingerprint of the one before: a chain.
- Batches are signed with a key that stays in the bank's HSM, and timestamped.
- An open-source verifier checks it all, without trusting the vendor.

WHAT NOT TO LOG

The least data that proves the most.

By default, a fingerprint of the prompt and the answer, not their content. Enough to prove what was sent, without adding personal data and banking secrecy to one more log.

Full content: only if the bank decides so, and encrypted with its key.

WHERE TO START

Not with the scoring model.

With the internal GenAI assistant:

- it deploys fast;
- it doesn't expose customers;
- it builds evidence and habits you'll reuse for the high-risk models.

SOVEREIGN AI READINESS ASSESSMENT

Where do your AI uses stand?

- 45 minutes on your uses: assistant, models, providers, data.
- No confidential data needed.
- A report within 24 hours, no commitment.
