Verikern Sovereign AI gateway for banks and insurers

Luxembourg · October 2026

Proving, request by request, that a bank's AI complies with the AI Act.

THE PROBLEM

Credit scoring and insurance pricing are **high-risk** uses under the AI Act. CSSF-supervised banks and insurers must show conformity evidence by **2 December 2027**. Today:

- AI requests go to US-controlled models, with no proof of where the data went;
- evidence is gathered by hand, through questionnaires, after the fact;
- auditors and the CSSF ask for a traceable record that no current tool produces for the AI Act.

THE SOLUTION

1. **Route** every request to an approved model, according to a sovereignty level set for each AI system.
2. **Block** what is not allowed: strictly confidential data never leaves the bank.
3. **Log** every request in a signed, tamper-evident record (hashes, not content).
4. **Generate** the AI Act technical file from that log.

Runs on the bank's own Kubernetes or OpenShift, with no outbound traffic to Verikern, or as SaaS in a Luxembourg datacentre.

WHAT SETS US APART

- **Compliance as code**, not questionnaires.
- **Verifiable without trusting us**: the log format and the verifier are published.
- **Sovereign and neutral**: the bank keeps its keys (HSM), its data and its choice of models.
- **One record, three obligations**: AI Act, DORA's ICT register, GDPR.

CUSTOMER AND BUSINESS MODEL

- **Buyer:** CIO or head of IT risk; sign-off by the compliance officer.
- **First pilot:** an internal GenAI assistant. Fast to deploy, no customer-facing risk, and it builds evidence the bank can reuse for its high-risk models.
- **Pricing:** €25k to €50k per AI system per year, evidence pack and label included. Range still to be validated.

WHERE WE ARE

- Architecture and design principles settled; technical base chosen (Envoy AI Gateway, Go).
- **Clickable demo**: rules, hash chaining, signatures and verifier are real; models and latency are simulated.
- Customer validation kit ready; first interviews coming up.
- The founder has already built **NEXOPS ONE**, a DORA register tool.
- Full-time on the product from **Q1 2027**.

ROADMAP

Q4 2026 – Q1 2027	Interviews, letters of intent, co-founder, company set-up
2027	€300k to €500k angel round; MVP; first bank pilot
Before 2 Dec 2027	Paid pilot in production, then a RegTech seed round

TEAM

Nephthali Djabon, CEO and technical founder: 20 years in secure, regulated infrastructure. Currently searching for a **regulatory co-founder** (AI Act, CSSF, DORA) and an ML advisor (SnT or Uni.lu).

WHAT WE ARE LOOKING FOR FROM LE VILLAGE BY CA

1. **A programme** that fits our stage (pre-seed, product in development).
2. **Conversations with IT Risk or Compliance teams** at the group's Luxembourg entities, to validate the need and prepare a pilot.
3. **Advice** on the 2027 fundraise and on finding a regulatory co-founder.
